READINESS TO RETURN
Assess your human research study’s readiness to return to in-person interventions:

Step 1: Building approval
- Do you have permission from your building manager and return to campus coordinator for your staff and participants to be in the facility?

Step 2: Study team readiness
- Are your staff ready to return?
- Has your HR representative reported the staff’s return date(s) to Central Administration?
- Are staff trained in the new/altered study procedures and cleaning protocols?

Step 3: Supplies and resources
- Do you have the supplies to clean your space and equipment between participants?
- Are you prepared to provide face coverings/masks to participants who need them?

Step 4: IRB amendment approval
- Are you only doing only the minimum necessary in-person activities?
- Do you have approval for all other activities to be done remotely?
